

PACS/RIS Reading Table

Build Your PACS/RIS Workstation on a Firm Foundation . . . Affordable, Power with Memory

At Gordon Instruments, our goal is to assist in the improvement of your clinical radiology productivity, workflow, and health care quality. With that in mind, we have designed the Gordon PACS/RIS Reading Table—an integral component to complement your PACS, RIS, or patient information workstations throughout your health care system.

As a radiologist who spends many hours reading from video display terminals, you know comfort plays an important role in achieving increased productivity. To suit the demands of the job at hand, our dual level reading table is fully power adjustable. If your needs change, so do your possibilities. The one-touch memory pad remembers

four sets of the positions of both levels—four users can switch the table to their desired positions quickly.

Employing various technologies, your patient information is presented in many ways. To accommodate the tools you need, we have provided ample space to view your patient's electronic record and reports with your Radiology Information System. For easy access to data input, the table has additional space for a computer, keyboard, and mouse. Your digital, film-less X-rays can be viewed in an area large enough to support multiple flat panel displays in portrait mode. Master Jackets can be placed on the expansive work surface.

The benefits are substantial. An integration of technologies, the tools they demand, and the rapid adaptation of personnel to serve your patients are the keys to providing excellence in patient care. We at Gordon Instruments continue our commitment to that principle, providing you with quality health care products.
